Do explicit festival features help?

Binay Verma · College results update · 1 November 2026

An exploratory added-feature experiment, with matched controls.

Daily supplied electricity · Delhi, Karnataka and Maharashtra.

What was checked between the steps?

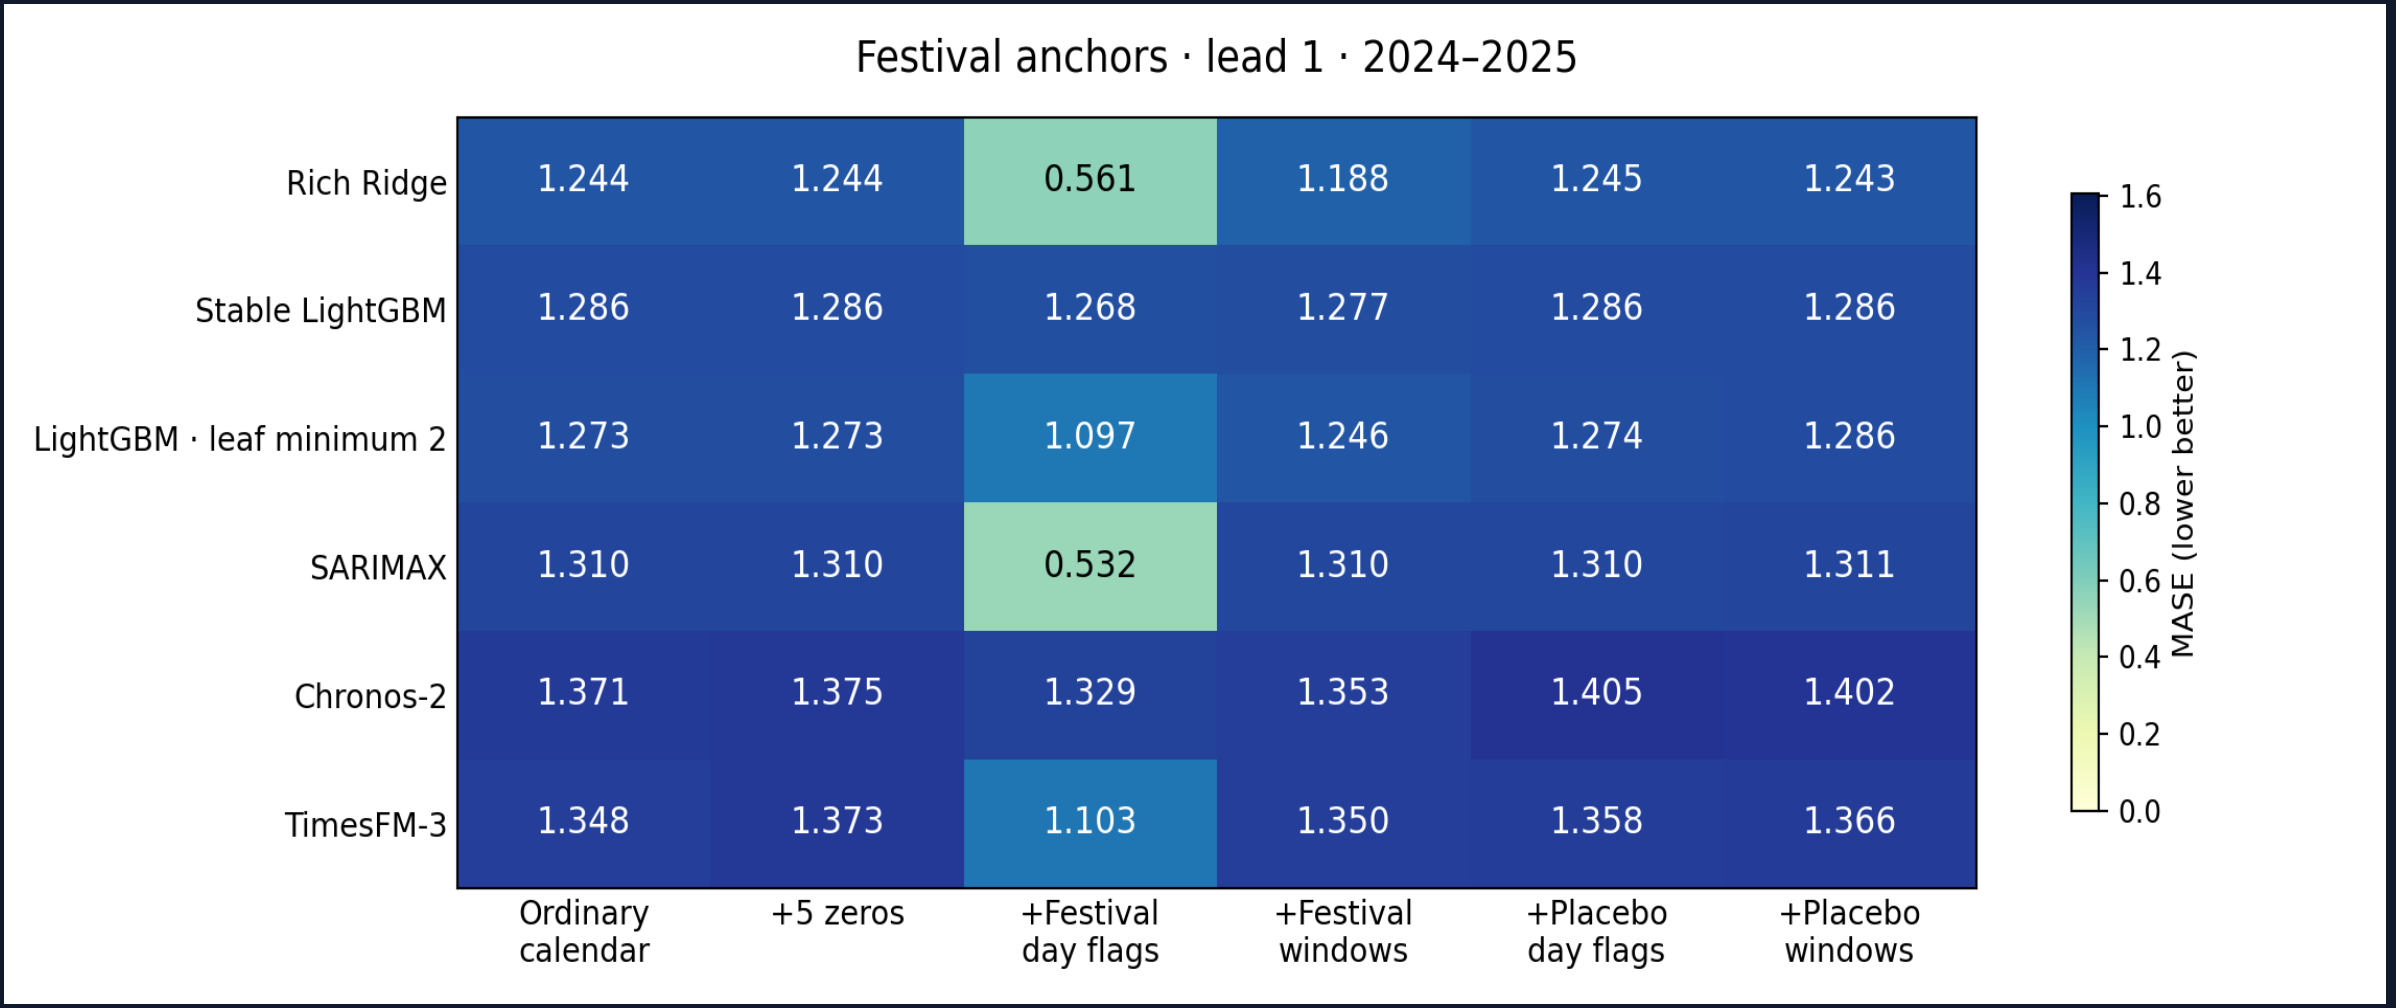

Named training/context dates cover 2022–2025: 58 anchors.

Karnataka Ganesh 2023: 18 Sep; Maharashtra: 19 Sep.

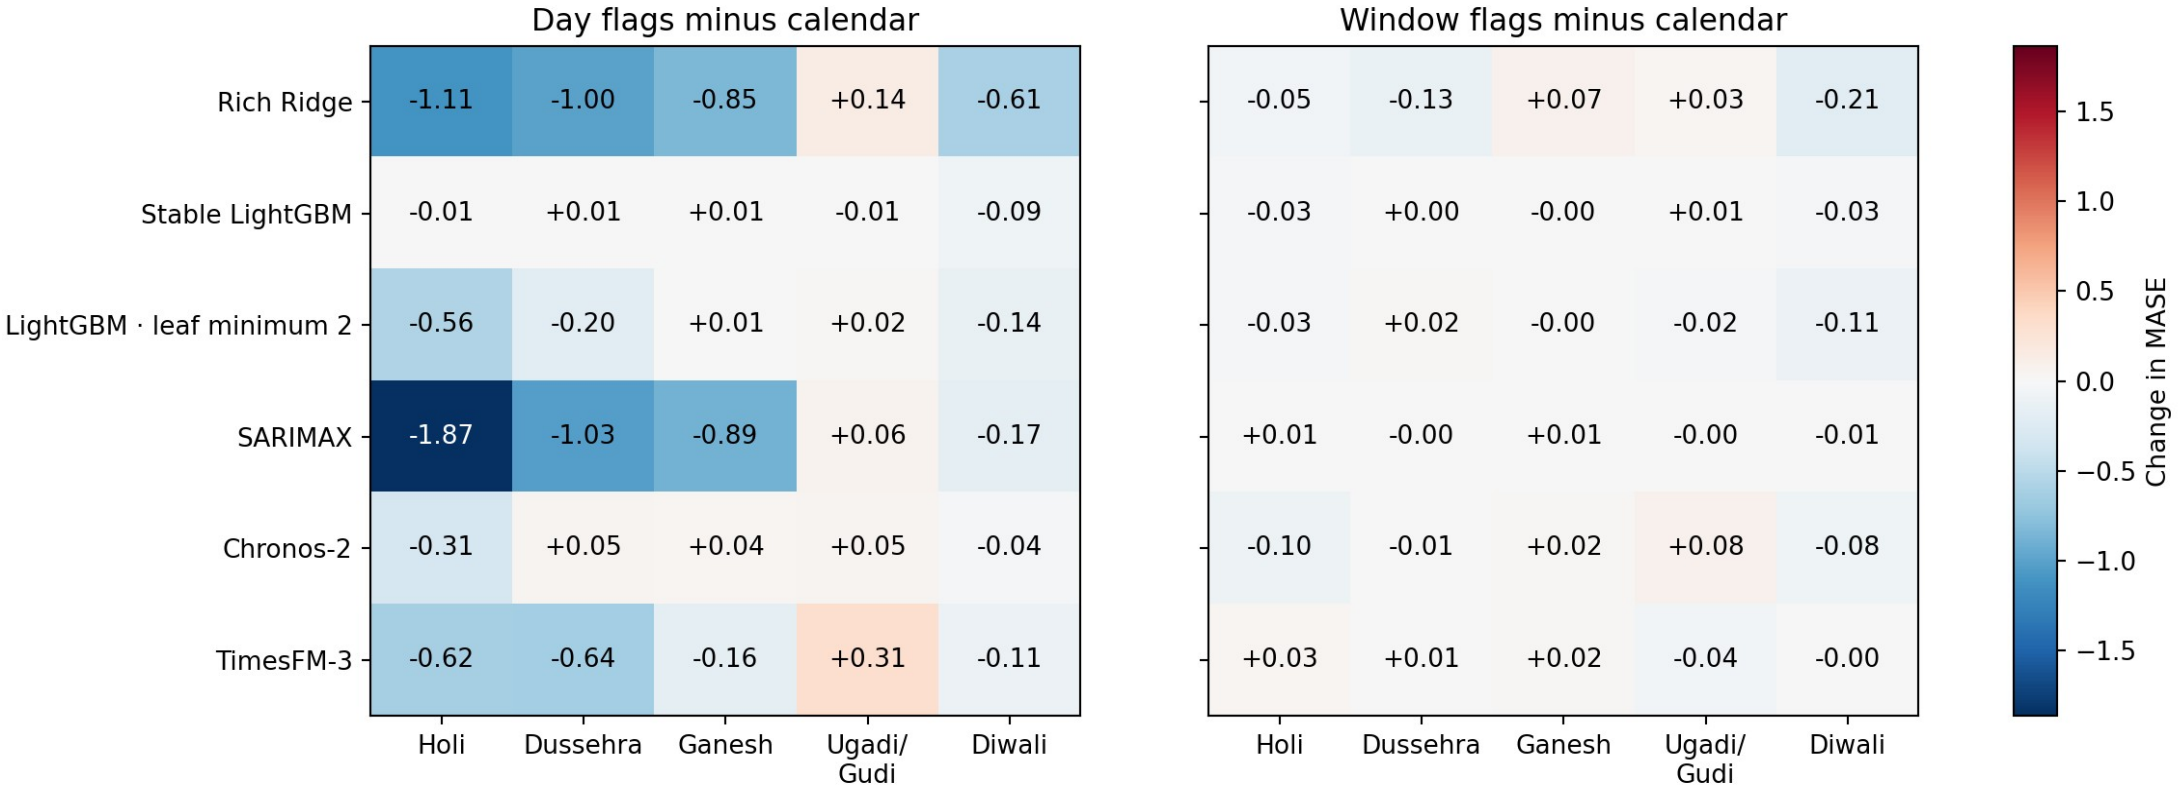

Same-size zeros and shifted active placebo features.

Original pre-year model settings retained; tree capacity checked separately.

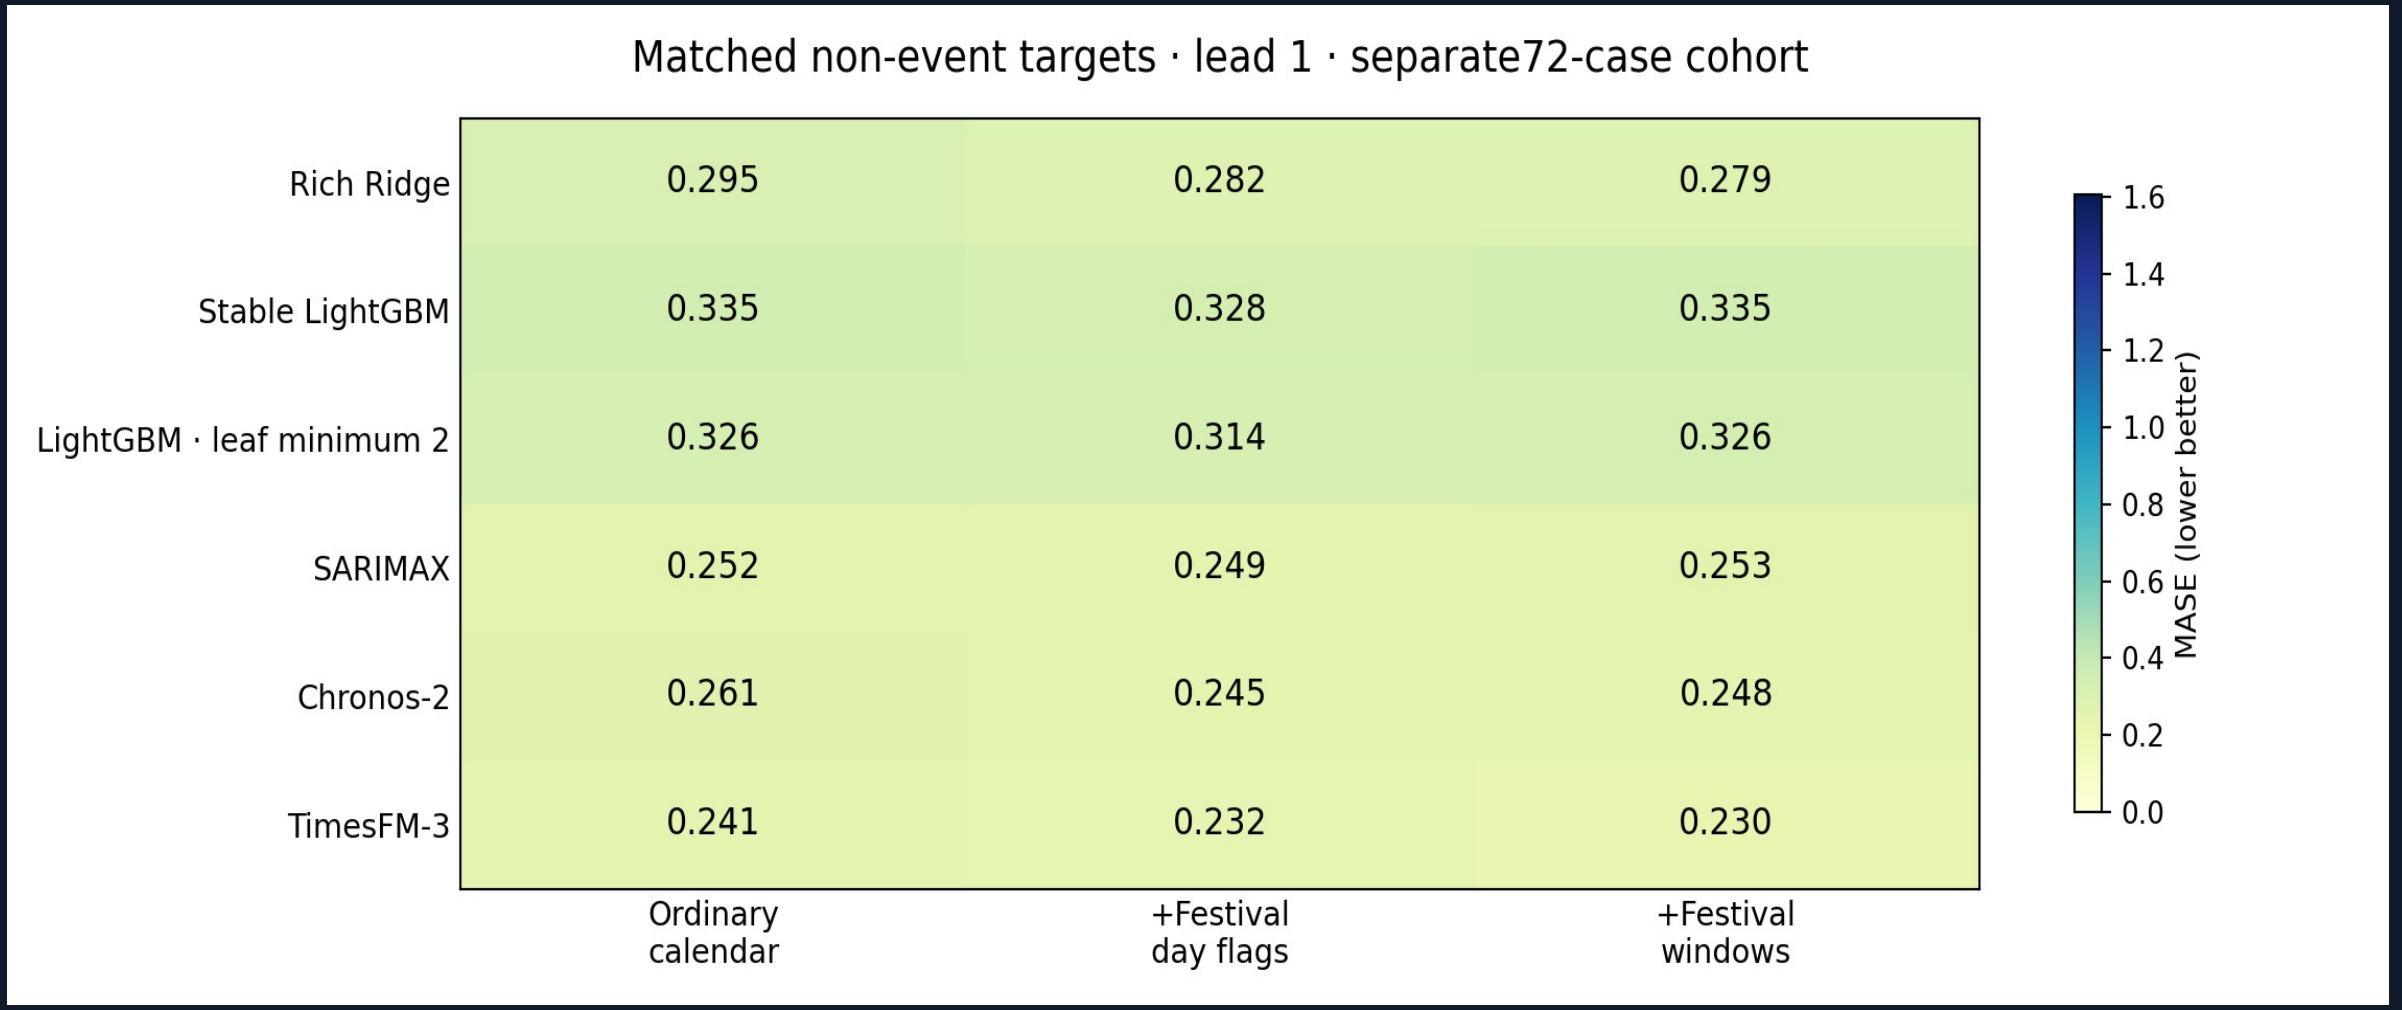

Matched festival-anchor comparison

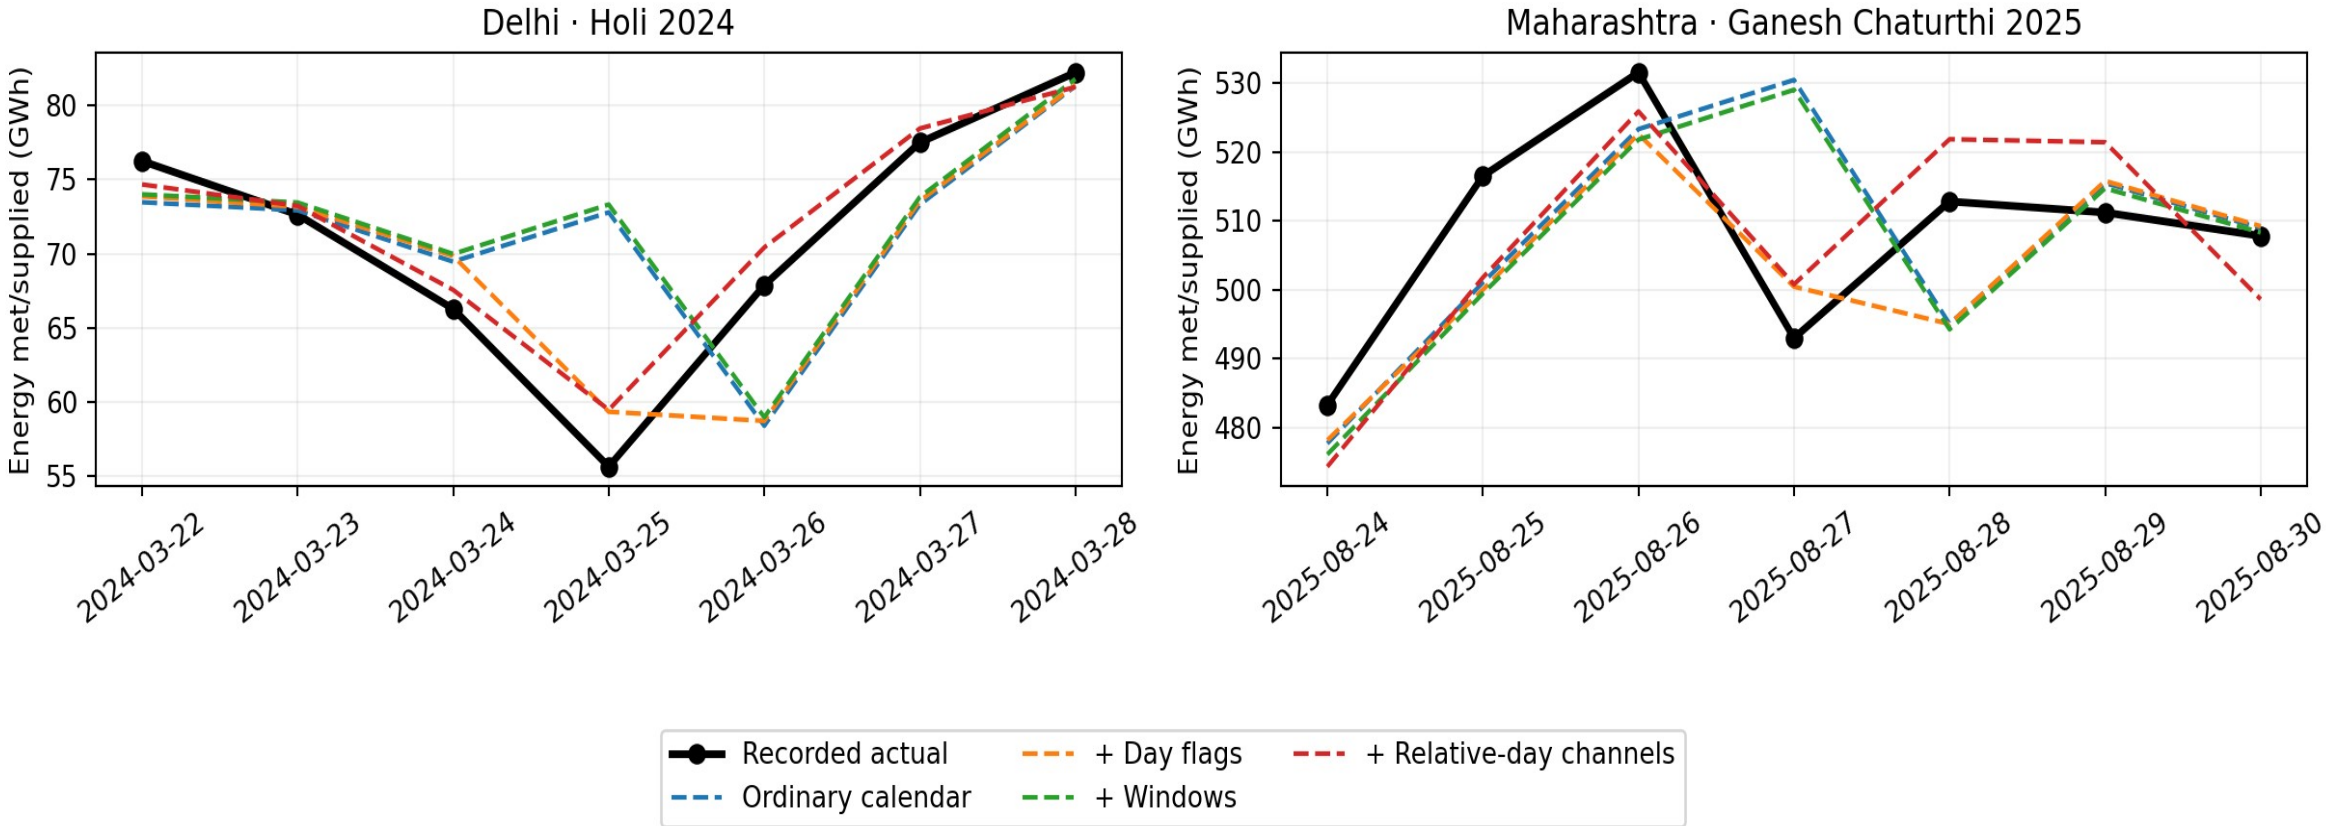

Effects differ across festival groups

Check costs away from festivals

Inspect timing in the wider windows

What these results can establish

Whether these fixed festival encodings change matched forecast errors.

Whether changes exceed the zero and active placebo controls.

Whether ordinary-day errors also change under the same settings.

Model, representation, sparse-history and year limits remain.

Sources and next scientific gates

Data: Robbie Andrew / GRID-INDIA / POSOCO; source clarification pending.

Calendar evidence: annual state notices, with documented scope limits.

Models: pinned Chronos, TimesFM and local classical/ML baselines.

Later: source/human review and unchanged prospective outcome scoring.
