Do rankings hold beyond Diwali?

Binay Verma · Results supplement · 1 November 2026

Five festival groups · 2024–2025 · Research in progress

Expanded comparison, fixed evaluation cases

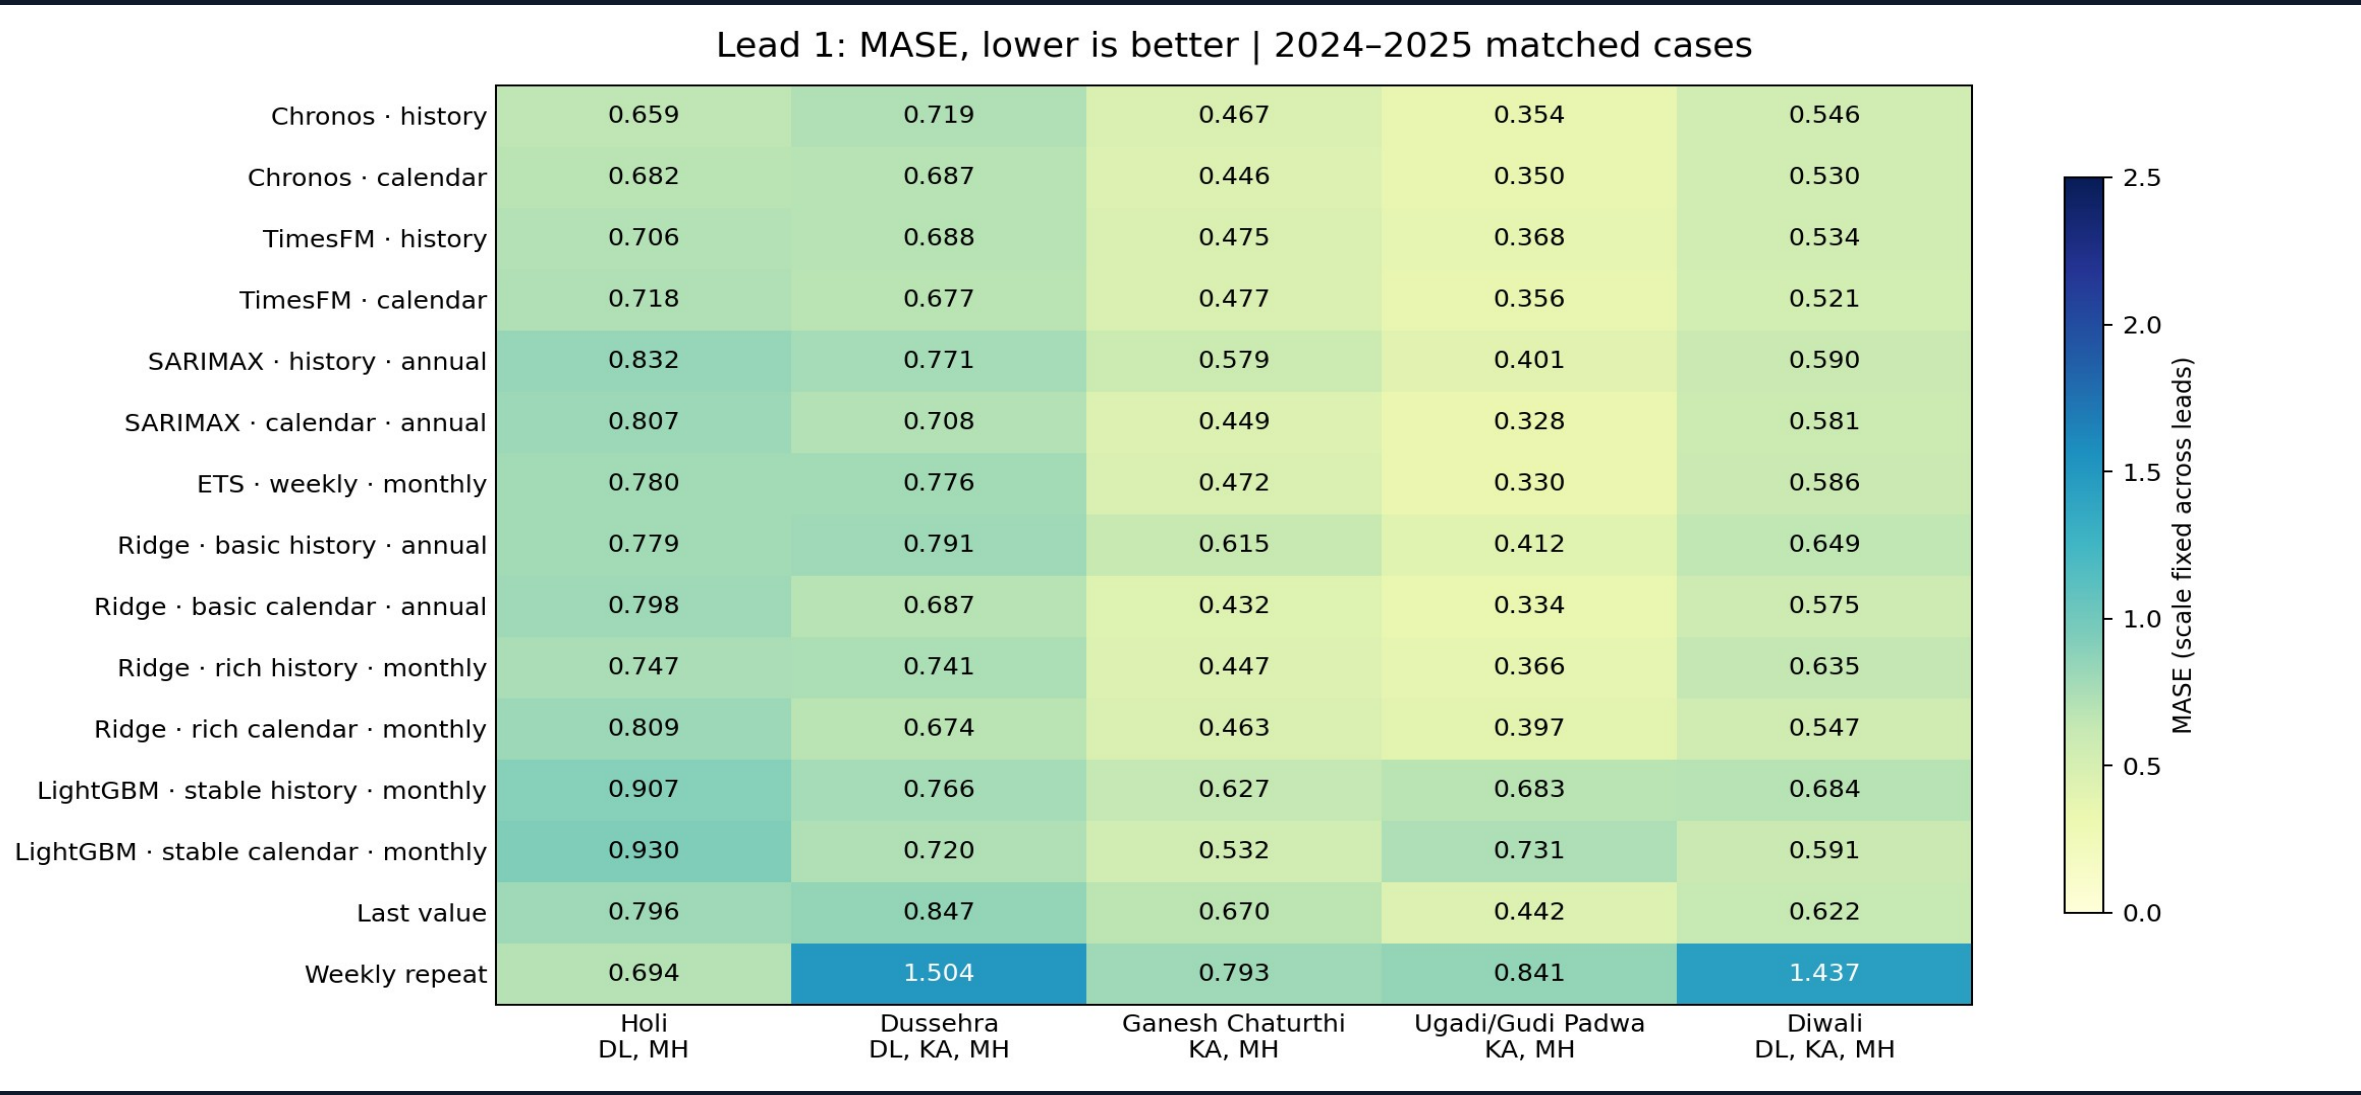

528 identical cases per configuration; 15 configurations.

Holi: Delhi/Maharashtra. Ganesh and Ugadi/Gudi: Karnataka/Maharashtra.

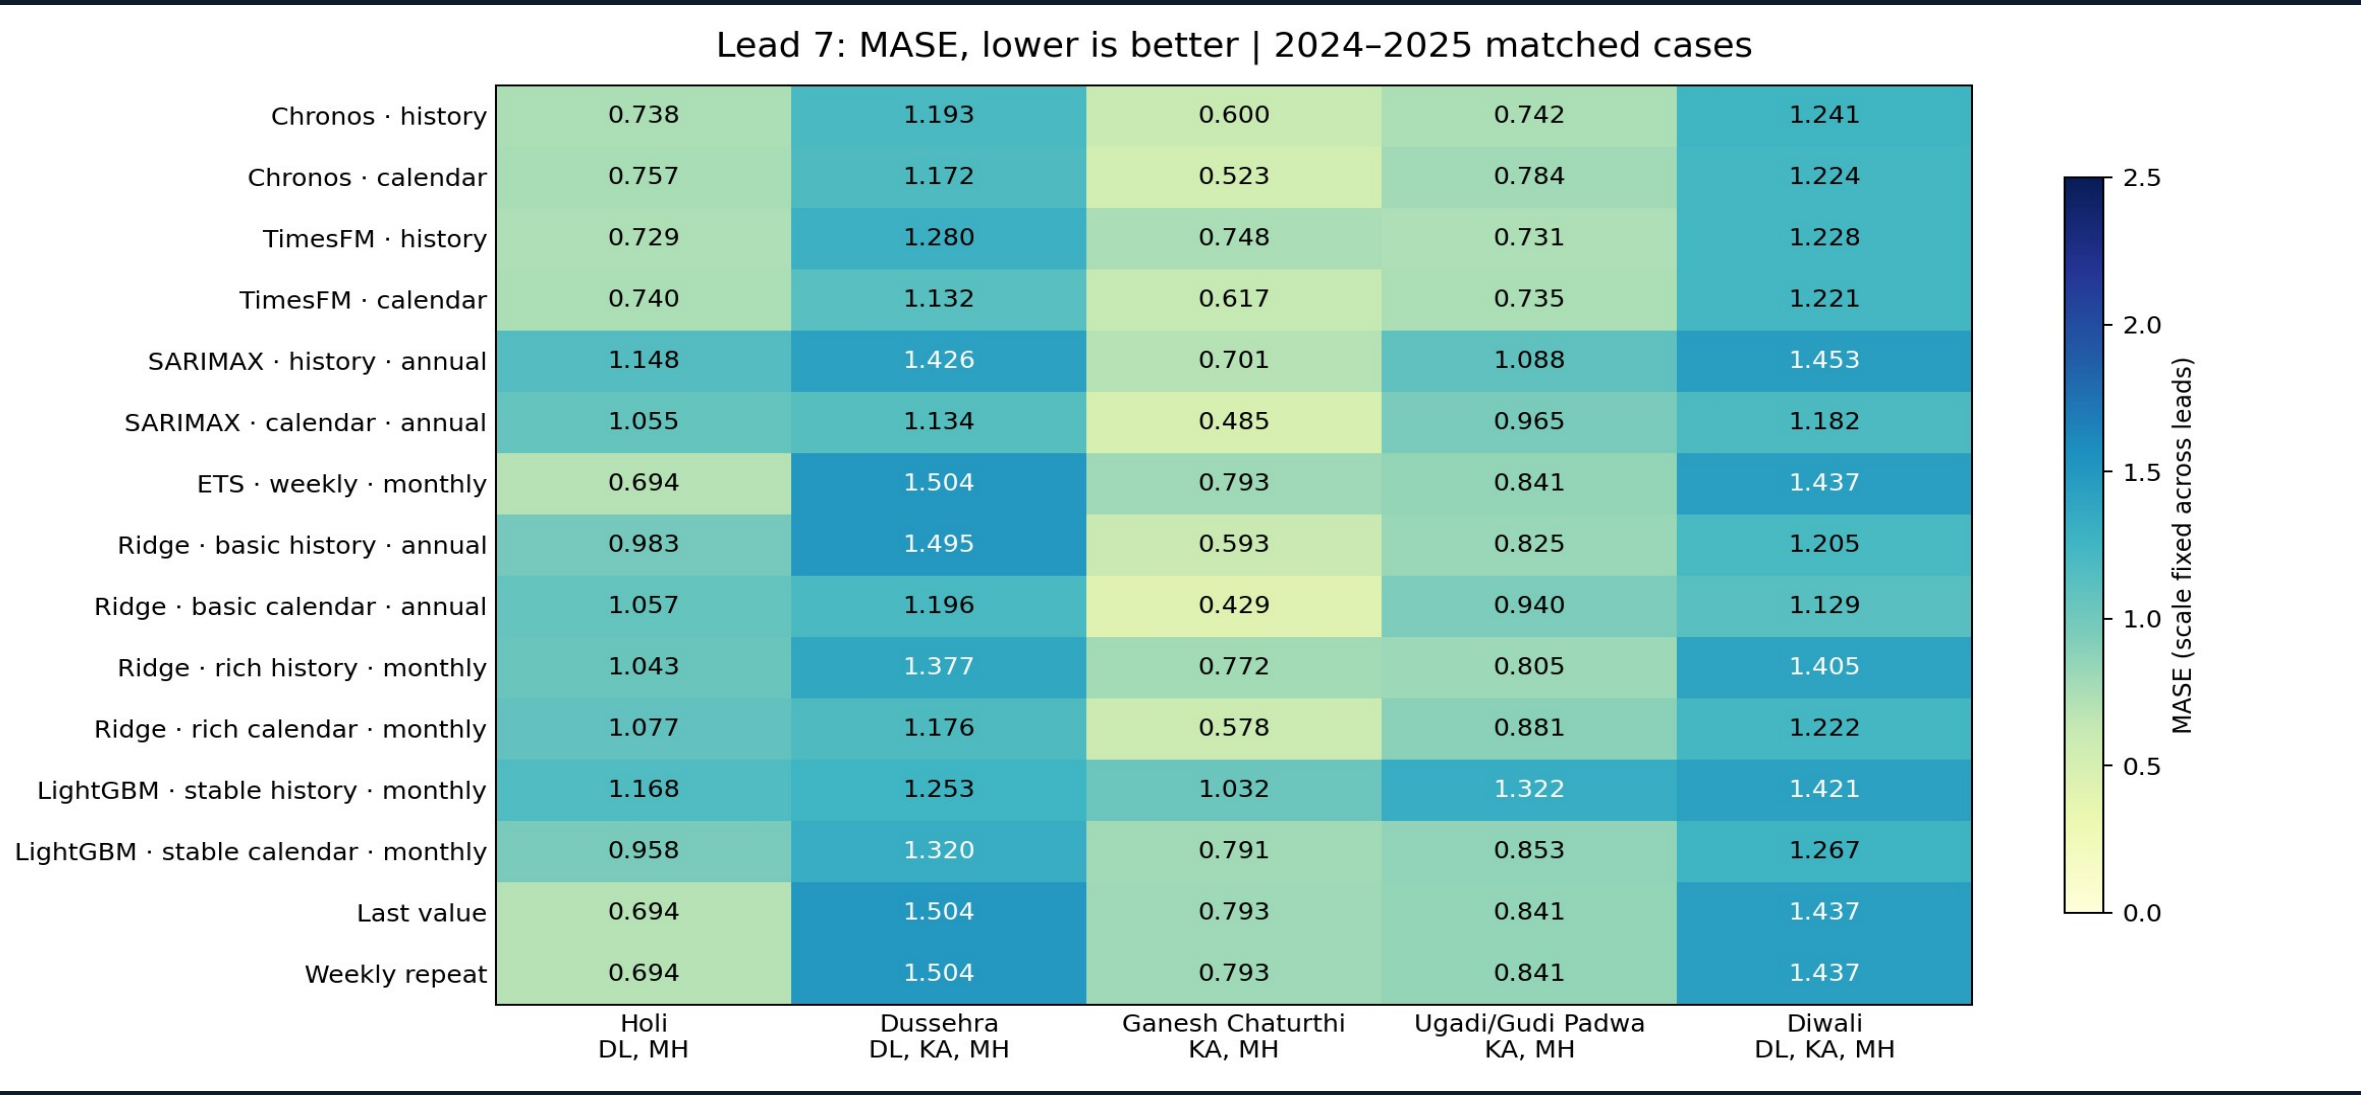

Dussehra and Diwali: all three states. Fixed windows and recorded labels.

Naive, Ridge, LightGBM, SARIMAX, ETS, Chronos and TimesFM families.

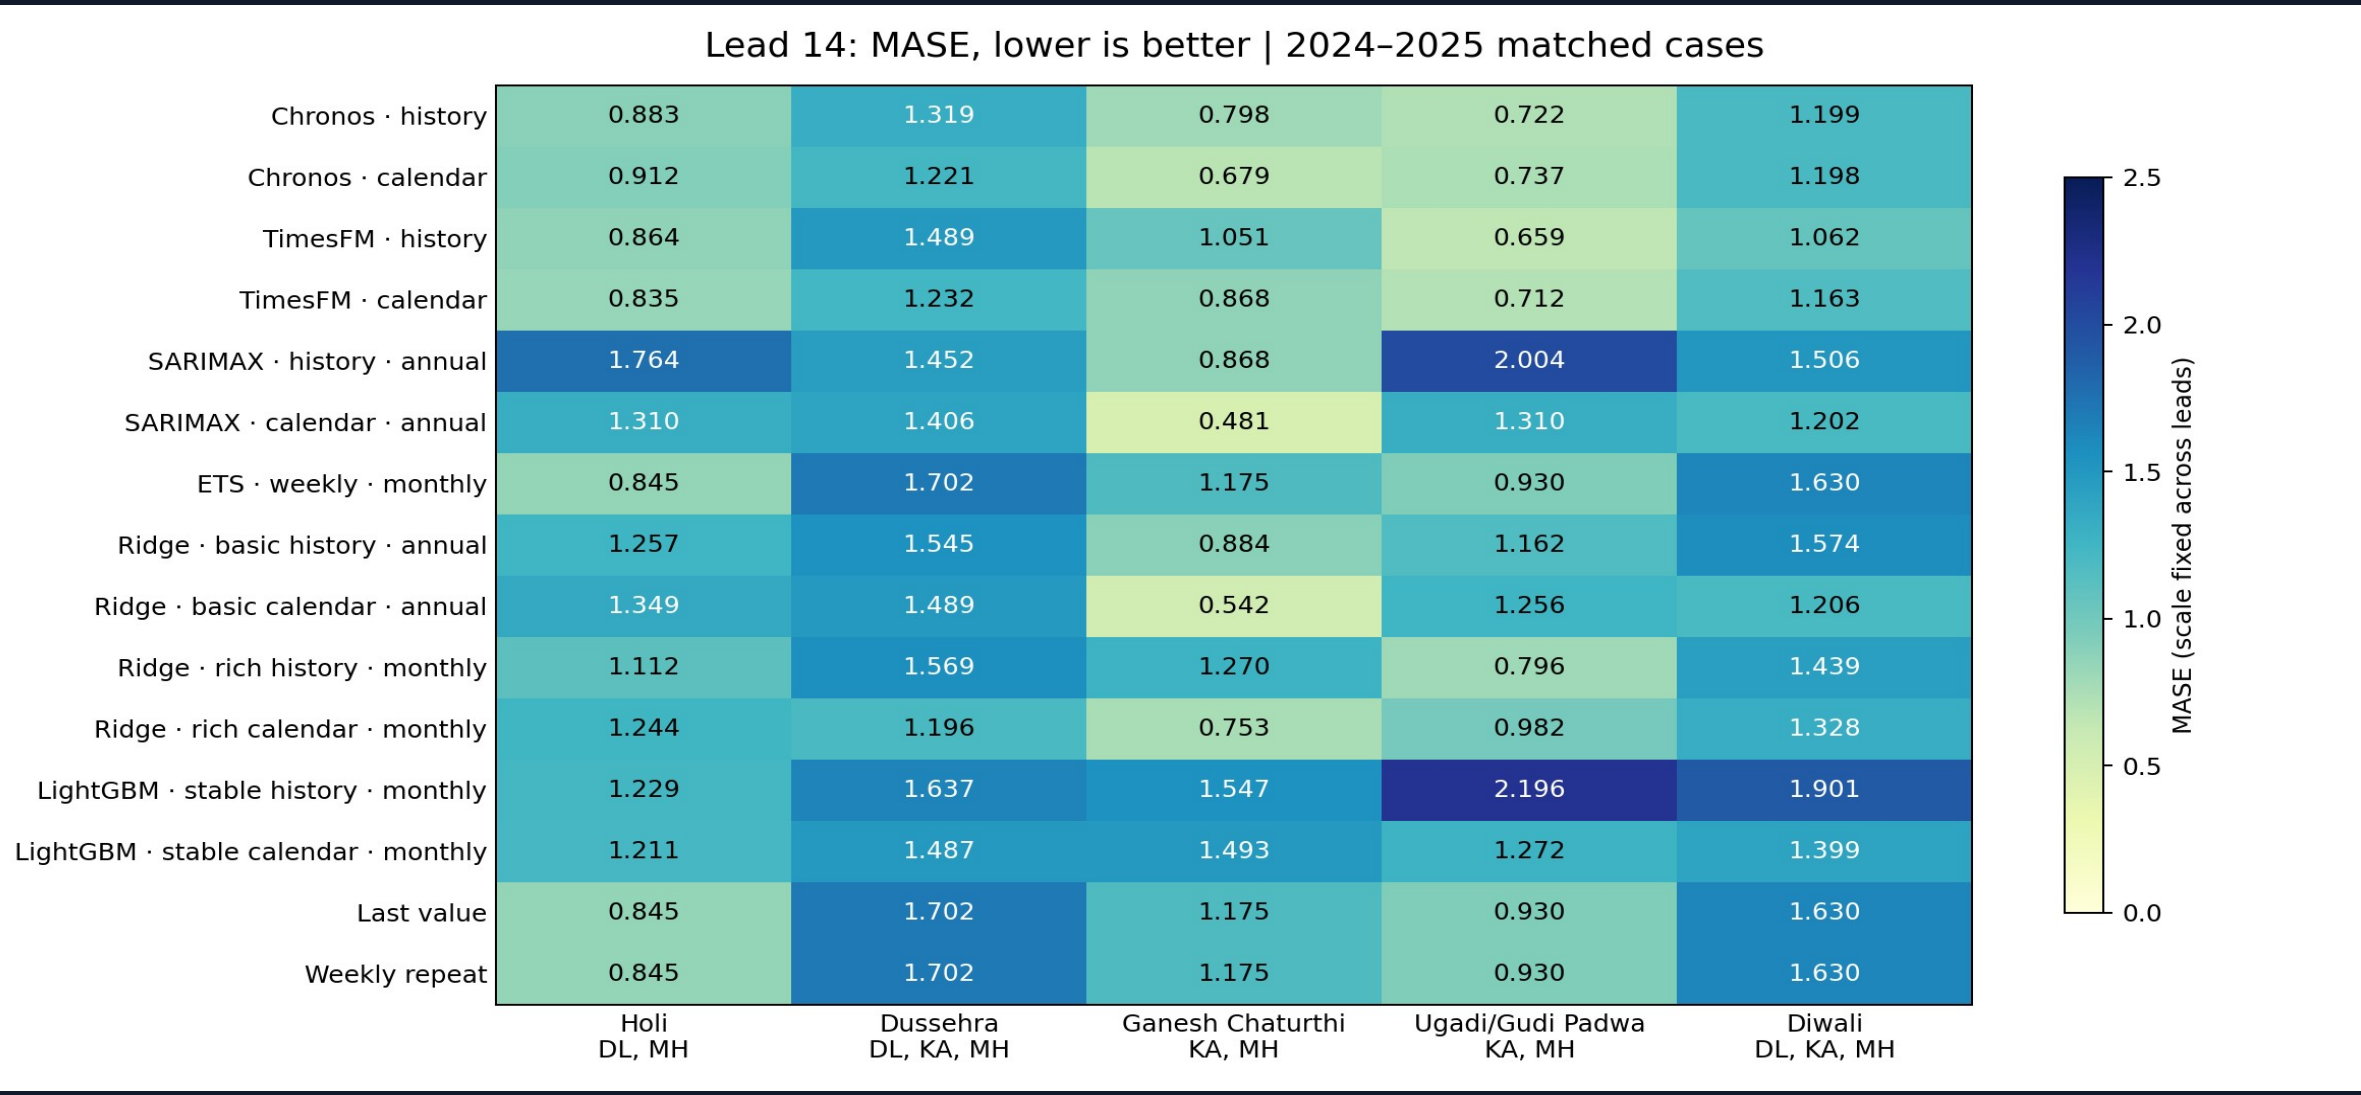

Lead 1: all configurations

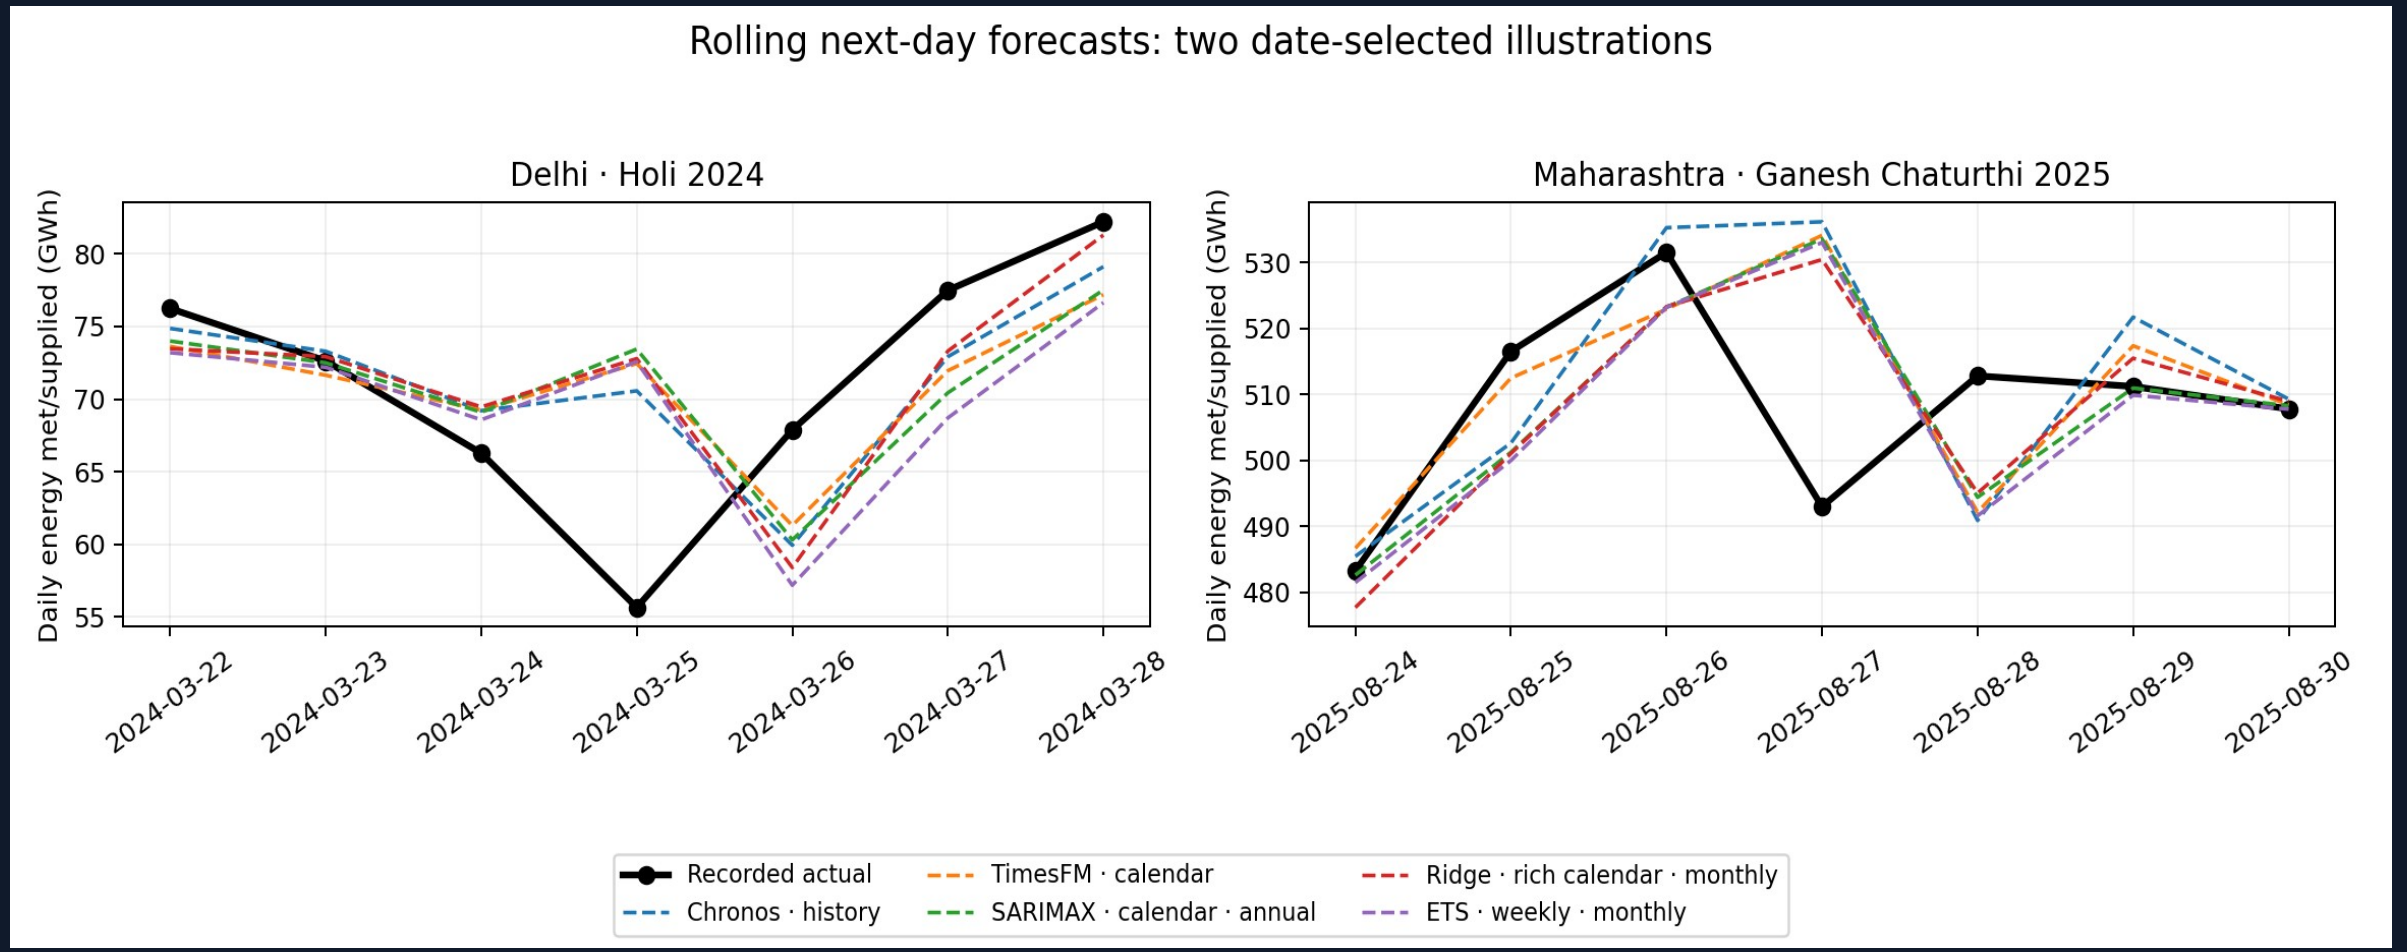

Lead 7: all configurations

Lead 14: all configurations

Inspect forecasts, not just rankings

What the extension supports

Model rankings depend on festival, state, year and horizon.

Classical models and simple baselines remain relevant comparators.

Ordinary-calendar inputs do not encode every festival identity.

Low historical error does not establish a universal winner.

Next experiment and remaining limits

Next: test added festival features using a separate training-date ledger.

Two historical years, correlated states and overlapping holidays limit inference.

Source permission, amendment review and independent human review remain pending.

Frozen future outcomes: score only after 11 November; no accuracy claim yet.
